

ATTENTION: AMBLER RESIDENTS

Protect your homes....Protect your families....Protect your investment!

Make your voices heard!

As a Citizen of Ambler, you have an influential tool at your disposal... **YOUR VOICE!**

There are important matters being discussed regarding your hometown and/or place of business. Matters that are not publicized enough.

You can find out more about these issues by contacting the Ambler government officials or contacting the developer of the proposed building. But MOST OF ALL you can get the information you need for an informed opinion AND participate in the future of YOUR town.

GO to the meetings. Listen. **SPEAK OUT!**

ASK QUESTIONS....

- Is the asbestos remediation **GUARANTEED** to be safe for the surrounding residents?
- What happens when you pave over 6 acres of land next to a creek that already **floods**?
- Can Butler Pike, Morris road and Mount Pleasant Avenue handle **more traffic**?
- What will happen to the **wildlife** in the reservoir and surrounding area?
- **Do we want an urban skyline**?
- What assurances do we have that this will indeed be a high-end complex?

What impact will the above issues have on our **property values**?

Upcoming Meeting Information

Wednesday April 20th at 7:00 pm

Citizens for a Better Ambler

Held at the Wissahickon Historical Society

on the Corner of Skippack (Route 73) and School Lane

bwahl@borough.ambler.pa.us

A group of concerned area citizens has put together a website that will be available for use on Tuesday, April 22.

This website will be designed to collect and disseminate information regarding this issue to Ambler area residents and businesses.

Citizens of the surrounding areas of Ambler need to get involved as well. Even though the Ambler council does not want to hear from any non-Amblerites, WE DO!

www.betterambler.net

The Pictures from this flyer were rendered after a balloon test from the proposed building site. These balloons never reached the developers proposed 220 feet. The pictures were based off of the actual height reached during the test, a maximum of 180 feet.
